

$$z_\ell^t \leftarrow z_\ell^t + \alpha m_A(\ell)$$

later layers at this slot
carry the added vector

read-feature candidate
task mean at target tokens
 $m_A(\ell)$

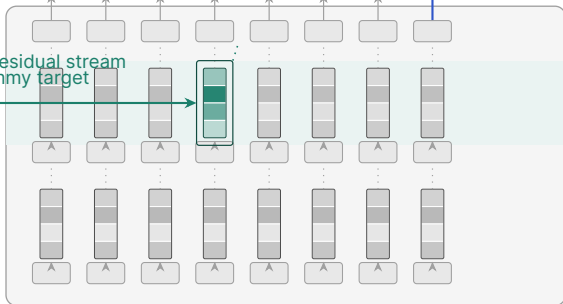

added to the residual stream
at the dummy target

layer L

layer ℓ

layer 1

Language model

with the read feature added without it (unsteered)

compile

wrong answer

Q:

climber

A:

_

\n

Q:

compiler

A:

input

dummy target:
the real target
is replaced by _

cue
